## Mobile Rinse and Crush Systems

for reuse or recycling of containers up to 95 gallon overpacks

Gasoline engine-powered rinse and crush unit, put in service in 1995.

### Mobile Drum Recycler I

**RINSE ONLY - or - RINSE & CRUSH - or - CRUSH ONLY**

Do it at your customer's place. Our mobile units are about as self-contained as they can get. Diesel engine runs a hydraulic system which provides the background power for water pumps as well as hydraulic-driven devices. Diesel, Kerosene or Propane fuels the burners for the heaters.

With a water tank in the back of the pick up truck or mounted on the trailer, you can be set up quickly and be in operation in a matter of minutes. Leave all the waste water with the customer to be handled in their wastewater treatment plant or hauled off. At 30 drums per hour triple-rinsed and crushed your customer will be happy and you and your crew can get a lot accomplished.

**Get in. Get it Done. Get Out.**
